This sequence encodes the canine lymphocyte activation factor (CLAF) of the invention. CLAF activates lymphocytes, especially canine cytotoxic T cells. The protein contains a p35 and a p40 subunit. CLAF or antibodies recognising it may be used in the treatment of viral diseases in dogs (such as canine distemper, canine parvovirus and canine infectious hepatitis). The antibodies may also be used in isolation of CLAF from culture of the transformant host cells by affinity chromatography. The p40 homodimer can be used for the treatment of autoimmune diseases in dogs

Nucleic acids encoding modified cytokine polypeptides (i.e. modified p40 and p35 polypeptides), useful for treating various diseases e.g. diabetic retinopathy and cancer.

Claim 1; Page 137; 223pp; English.

The invention relates to nucleic acids encoding modified cytokine polypeptides (i.e. modified p40 and p35 polypeptides). The modified cytokine polypeptides have T-cell proliferative and interferon (IFN)-gamma induction activities. The polypeptides and polynucleotides of the invention are useful for treating various diseases e.g. bacterial infections, AIDS, diabetic retinopathy and cancer. The polypeptide and polynucleotide may also be useful as a vaccine adjuvant, to enhance a vaccinated host's cell-mediated immunity for protective response to a pathogen. The present sequence is a modified human p40 protein encoding DNA

 Novel protein comprising cytotoxic lymphocyte maturation factor in
 substantially pure form or protein which exhibits cytotoxic lymphocyte
 maturation factor activity, useful as antitumor and immunoenhancing
 agent.

 Claim 17; Page 28-29; 74pp; English.

 The invention relates to a protein which comprises a cytotoxic lymphocyte
 maturation factor (CLMF). The protein is useful for stimulating activated
 T-cells which involves treating T-cells with the protein. The method
 further involves treating the activated T-cells with IL2 or its
 biologically active fragment. The protein is useful for stimulating
 natural killer cells which involves treating the natural killer cells
 with the protein. The protein has immunoenhancing and antitumour effects
 when used as single therapeutic agent in vivo. The present sequence is
 used in the exemplification of the present invention.

CC   AAQ97484 and AAQ97485 are from human lymphoblast cell line RMPI 8866. IL-
CC   12 is a heterodimeric cytokine which was originally identified as a
CC   factor which induces gamma-interferon from T cells and natural killer
CC   cells as set forth in PCT/US91/06332, published April 2 1992, and
CC   incorporated by reference. EP 433827, published June 26 1991, disclosed
CC   IL-12 as a cytotoxin lymphocyte maturation factor. In the patent, IL-12
CC   is defined as a heterodimeric glycoprotein comprised of two covalently
CC   linked subunits having mol. wts of about 40 kD and 35 kD. The two
CC   subunits may be disulfide-bonded. IL-12 is administered to prevent or
CC   ameliorate GVHD. Dosage is 1 ng-0.1 mg (esp. 1.0 ng-1 microg)/kg daily
CC   for 3 days, the first dose given 1 hr. after transplant. IL-12 can be
CC   used as the native heterodimer or as subunits. (Updated on 25-MAR-2003 to
CC   correct PN field.)

Nucleic acids encoding modified cytokine polypeptides (i.e. modified p40 and p35 polypeptides), useful for treating various diseases e.g. diabetic retinopathy and cancer.

PS Claim 5; Page 142; 223pp; English.

CC The invention relates to nucleic acids encoding modified cytokine polypeptides (i.e. modified p40 and p35 polypeptides). The modified cytokine polypeptides have T-cell proliferative and interferon (IFN)-gamma induction activities. The polypeptides and polynucleotides of the invention are useful for treating various diseases e.g. bacterial infections, AIDS, diabetic retinopathy and cancer. The polypeptide and polynucleotide may also be useful as a vaccine adjuvant, to enhance a vaccinated host's cell-mediated immunity for protective response to a pathogen. The present sequence is human p40 protein encoding DNA

Novel anti-tumor agent comprising interleukin-23 gene, or cell transduced with interleukin-23 gene, as active ingredient, useful for activating anti-tumor immune response and treating tumor.

Disclosure; SEQ ID NO 2; 23pp; Japanese.

The invention relates to a novel anti-tumour agent comprising an interleukin-23 (IL-23) gene, or a cell transduced with an IL-23 gene, as an active ingredient. The molecules of the invention demonstrate cytostatic and immunostimulant activities and may be useful within an anti-tumour agent which activates an anti-tumour immune response. The agent is safe when used in cancer treatment, may be combined with other treatments and induces tumour-specific acquired immunity. The current sequence is that of the human interleukin-23 (IL-23) p40 subunit DNA of the invention.

Pharmaceutical formulation for inhibiting immune response generated by interleukin-23 (IL-23) and treating e.g. autoimmune diseases, comprises p40 molecules or gene encoding p40 molecules.

Claim 3; SEQ ID NO 1; 12pp; Japanese.

This invention relates to a novel pharmaceutical formulation used for inhibiting the immune response generated by interleukin-23 (IL-23). Specifically, it refers to a formulation comprising the p40 protein or the gene encoding this protein thereof. The present invention describes the p40 gene contained in the form of a viral or non-viral vector that is capable of expressing and secreting the p40 protein. This vector can be introduced into a cell such that it can in turn inhibit the immune response generated by the production of IL-23. Accordingly, this method is useful for suppressing organ transplant rejection or treating immunological disorders associated with abnormal immune response with regard to IL-23. Furthermore, it can be used to treat autoimmune diseases and allergy. As such, compositions exhibit immunosuppressive and antiallergic activities. This polynucleotide sequence is the human p40 gene of the invention.

PT Novel compound comprising target specific portion having monoclonal
PT antibody having specificity for oncofetal fibronectin and effector
PT portion having interleukin-12, useful for treating cancer e.g.
PT glioblastoma.
XX
PS Claim 36; SEQ ID NO 10; 83pp; English.
XX
CC The invention provides a compound comprising a target specific portion
CC and an effector portion, in which the target specific portion comprises
CC or consists of a monoclonal antibody having specificity for oncofetal
CC fibronectin, or its fragment or variant which retains the antigen binding
CC specificity of the parent monoclonal antibody, and the effector portion
CC comprises or consists of interleukin-12, or its functional fragment or
CC variant. The monoclonal antibody binds to a region of oncofetal
CC fibronectin other than the extra-domain B region. Preferably, the
CC compound comprises a target specific portion that is capable of binding
CC to an amino acid sequence present in fibronectin expressed in both fetal
CC and normal adult tissue, especially the repeat 7 domain of fibronectin,
CC and is preferably specific for human oncofetal fibronectin. The
CC monoclonal antibody is preferably a BC1 antibody. The invention also
CC provides nucleic acids encoding the compounds of the invention and
CC methods of their use in the production of these compounds, as well as
CC methods of using the compounds in medicine, especially for the treatment
CC of cancer in a patient, where the patient is a mammal, preferably a
CC human, and the patient has a solid tumor. The cancer is a glioblastoma
CC (claimed) or ovarian, gastric, colorectal or pancreatic cancer. The
CC present sequence is the coding sequence of the p40 domain of human
CC interleukin-12. In a claimed compound, the effector portion consists of a
CC single chain interleukin-12 comprising or consisting of an interleukin-12
CC p40 domain conjugated to the interleukin-12 and p35 domain AEB48815 via a
CC disulfide bond. A further claimed compound comprises the p40 sequence
CC linked by disulfide bond to a fusion protein AEB48818 comprising the BC1
CC heavy chain fused to human interleukin-12 p35.

 Novel human or mouse interleukin (IL)-12p40 subunit mutant genes, that
 inhibit secretion of IL-12p40, but normally secrete IL-12p70, useful as
 adjuvant for DNA vaccination and gene therapy to AIDS, cancer, malaria.

 Claim 1; Page 89-90; 103pp; English.

 The invention relates to mutant interleukin (IL)-12p40 subunit genes
 which produces highly active human or mouse IL-12p40 sequence. IL-12p40
 DNA is useful for DNA immunisation or gene therapy for treating diseases
 such as cancer, AIDS, hepatitis C, hepatitis B or influenza, malaria or
 tuberculosis, as an therapeutic or prophylactic adjuvant. IL-12p40 DNA
 induces immune response by increasing the hydrolysis activity of
 cytotoxic T lymphocytes when IL-12p40 subunit gene is injected with the
 DNA vaccine, or increasing secretion of interferon (IFN)-gamma from T
 helper cells or CD8+ T cells when IL-12p40 subunit gene is injected with
 DNA vaccine. IL-12p40 DNA is useful in gene therapy and as a DNA vaccine.
 The present sequence is a DNA encoding human Interleukin (IL)-12p40
 subunit protein

CC   The sequences given in AAQ67879-80 are expression cassettes which contain
CC   the p40 and p35 subunits of human interleukin-12 (IL-12) under the
CC   control of the entomopox virus (EPV) promoter and the vaccinia E3L
CC   promoter, respectively. These sequences were used in the construction of
CC   an ALVAC-based recombinant virus containing the genes for the two
CC   subunits of human IL-12. The p40 subunit was amplified using primers
CC   JP202 and JP189 and placed under the control of the entomopox virus (EPV)
CC   42 kD promoter in plasmid PBSHIL12p40II. The p35 subunit was amplified
CC   using primers JP186 and JP201 and placed under the control of the
CC   vaccinia E3L promoter using primers JP218 and JP220. The expression
CC   cassette was isolated and ligated with pBSSK+ generating plasmid
CC   PBSHIL12p35II. The p35 and p40 expression cassettes were excised and
CC   assembled in pBSSK+ to give PBSHIL12 in which the two expression
CC   cassettes are orientated head-to-head relative to each other. The
CC   combination casette containing the poxvirus promoted genes for both IL-12
CC   subunits was excised from PBSHIL12 and cloned in to ALVAC C6 vector
CC   plasmid pC6L to give pC6HIL12. Recombination between this donor plasmid
CC   and ALVAC rescuing virus produced recombinant virus ALVAC+IL12, which
```

contains both the human IL-12 genes in the C6 locus. The resulting virus may be used in a composition for inducing an antigenic or immunological response, ie. for immunisation against pathogens. (Updated on 25-MAR-2003 to correct PN field.)

PT Recombinant poxviruses comprising exogenous DNA encoding antigenic
PT determinants useful in immunotherapy to immunize against cancers and
PT other diseases such as influenza, Newcastle Disease and rabies.
XX
PS Example 27; Fig 33; 163pp; English.
XX
CC The present invention describes a recombinant poxvirus (I), comprising
CC exogenous DNA encoding an antigenic determinant of a pathogen which is
CC then expressed in vivo in infected host cells after administration to a
CC patient and therefore induces an immunological response. (I) may be used
CC to vaccinate patients against a wide range of diseases and disorders
CC depending on the type of antigen encoded by the exogenous DNA. (I) may be
CC used to vaccinate against diseases such as rabies, influenza and
CC Newcastle Disease. It is particularly useful for immunising against
CC cancers. The poxvirus (I) also provides a means of manipulating
CC lymphocytes and tumour cells for use in cell-based immunotherapeutic
CC modalities for cancer. (I) also have enhanced safety compared to
CC unattenuated viruses (attenuation reduces the virulence of the viruses)
CC and known recombinant poxvirus vaccines. This increased level of safety
CC reduces the possibility of a 'runaway' infection in the host and reduces
CC the chance of transmission from vaccinated to unvaccinated individuals
CC and contamination of the environment. The present sequence represents a
CC EPV 42 kDa/human IL-12 P40 expression cassette used in the
CC exemplification of the present invention

Paoletti E, Tartaglia J, Cox WI;

WPI; 2004-601998/58.

New recombinant poxvirus which is an attenuated avipox Virus that expresses an exogenous DNA encoding carcinoembryonic antigen and an exogenous DNA encoding B7 protein, useful for cancer therapy.

Example 27; SEQ ID NO 194; 181pp; English.

The invention describes a recombinant poxvirus containing exogenous DNA in a nonessential region of the poxvirus, where the poxvirus is an attenuated avipox Virus that expresses an exogenous DNA encoding carcinoembryonic antigen and an exogenous DNA encoding B7 protein. Also described are: a composition comprising a poxvirus above in admixture with a carrier; and expressing carcinoembryonic antigen and B7 protein in vivo comprising administering to a mammal the composition above. Disclosed are: making recombinant poxvirus defined above; recombinant poxvirus vaccine having an increased level of safety compared to known recombinant poxvirus vaccines; and a modified vector for expressing a gene product in a host. The recombinant poxvirus is useful for providing a recombinant poxvirus vaccine having an increased level of safety compared to known recombinant poxvirus vaccines. The recombinant poxvirus is useful for cancer therapy. This sequence represents a human IL-12 expression cassette used in the creation of NYVAC rescue virus and canarypox virus vector ALVAC comprising the human IL-12 gene.

Novel multifunctional fusion protein or protein complexes useful for treating cancer and viral infections, comprise two different cytokine molecules and a targeting group.

Example 1; Page 75-76; 90pp; English.

The present sequence is given in a specification relating to multifunctional fusion proteins and protein complexes comprising at least two different cytokine molecules and a targeting group such as an immunoglobulin. The fusion proteins and protein complexes are useful for treating cancers, and bacterial, viral, fungal and parasitic infections. They are also useful in gene therapy and as vaccines to prevent or treat various diseases

XX
PS Disclosure; Fig 25; 80pp; English.
XX
CC The present DNA sequence encodes the 40 kDa subunit of cytotoxic
CC lymphocyte maturation factor (CLMF) protein. The natural CLMF protein is
CC a 75 kDa heterodimer, where the 2 subunits (see AAT77850 for the 35 kDa
CC subunit) are bonded together via one or more disulphide bonds. CLMF
CC protein is produced by a human B lyphoblastoid cell line. CLMF
CC synergistically induces, in the presence of interleukin-2, the cytolytic
CC activity of lymphokine activated killer cells. CLMF is also capable of
CC stimulating T-cell growth. A novel antibody directed against an epitope
CC of CLMF protein (see AAW24237 for epitope) is capable of neutralising
CC and/or inhibiting CLMF bioactivity. This antibody may be used as an
CC affinity ligand for purifying the CLMF protein. The antibody can also be
CC used as an assay reagent for detecting the CLMF protein, and as a
CC medicament for selectively blocking the proliferation and activation of
CC cytotoxic T cells, e.g. in transplantation. (Updated on 25-MAR-2003 to
CC correct PF field.) (Updated on 25-MAR-2003 to correct PR field.)

Sub-unit of cytotoxic lymphocyte maturation factor protein - useful for producing protein and as antitumour agent.

Disclosure; Fig 25; 83pp; English.

The present DNA sequence encodes a 40 kDa subunit of cytotoxic lymphocyte maturation factor (CLMF) protein. The natural CLMF protein is a 75 kDa heterodimer, where the 2 subunits (see AAT97970 for the 35 kDa subunit) are bonded together via one or more disulphide bonds. CLMF protein is produced by a human B lyphoblastoid cell line. CLMF synergistically induces, in the presence of interleukin-2, the cytolytic activity of lymphokine activated killer cells. CLMF is also capable of stimulating T-cell growth. The subunits may be used for preparing the CLMF protein and for preparing medicants for antitumour therapy. (Updated on 25-MAR-2003 to correct PF field.) (Updated on 25-MAR-2003 to correct PR field.)

PT Sub-unit of cytotoxic lymphocyte maturation factor protein - useful for
PT producing CLMF protein and as an antitumour agent.
XX
PS Disclosure; Fig 25; 83pp; English.
XX
CC The present DNA sequence encodes a novel 40 kDa subunit of cytotoxic
CC lymphocyte maturation factor (CLMF) protein. The natural CLMF protein is
CC a 75 kDa heterodimer, where the 2 subunits (see AAV00402 for the 35 kDa
CC subunit) are bonded together via one or more disulphide bonds. CLMF
CC protein is produced by a human B lyphoblastoid cell line. CLMF
CC synergistically induces, in the presence of interleukin-2, the cytolytic
CC activity of lymphokine activated killer cells. CLMF is also capable of
CC stimulating T-cell growth. The subunits may be used for preparing the
CC CLMF protein and for preparing medicants for antitumour therapy. (Updated
CC on 25-MAR-2003 to correct PF field.) (Updated on 25-MAR-2003 to correct
CC PR field.) (Updated on 25-MAR-2003 to correct PI field.)

New antibodies to cytotoxic lymphocyte maturation factor - useful for detecting, purifying, and/or blocking proliferation and activation of cytotoxic T cells, such as in transplantation(s).

Example 10; Fig 25; 71pp; English.

An isolated antibody has been developed which binds specifically to cytotoxic lymphocyte maturation factor (CLMF) and neutralises CLMF induced proliferation by more than 50% in a CLMF dependent T cell growth assay and/or inhibits binding of at least 60% of the factor to phytohaemagglutinin (PHA) activated peripheral blood lymphocyte (PBL) blasts as determined in a CLMF receptor binding assay. CLMF is a heterodimeric protein having a molecular weight band of 75 kD, determined by sodium dodecyl sulphate-polyacrylamide gel electrophoresis (SDS-PAGE) under non-reducing and/or reducing conditions, providing a first subunit having a molecular weight band of 40 kD and a second subunit having a molecular weight of 35 kD. The present sequence encodes the CLMF 40 kD subunit, from an example of the present invention. The antibody can be used for the purification and/or detection of CLMF. It is also used in therapeutic treatments which require selective blocking of proliferation and activation of cytotoxic T cells (CTLs) such as in transplantation

 Pharmaceutical composition useful for activating T cell growth factors in
 assays comprises heterodimeric protein comprising first and second
 subunits and carrier.

 Disclosure; Fig 25; 72pp; English.

 The invention describes a pharmaceutical composition active in a T cell
 growth factor assay. The pharmaceutical composition comprises a
 heterodimeric protein having a molecular weight of 75 kDa as determined
 by Sodium dodecyl sulfate polyacrylamide gel electrophoresis (SDS-PAGE)
 CC   under non-reducing conditions, and under reducing conditions, providing a
 CC   first subunit having a molecular weight of 40 kDa as determined by (SDS-
 CC   PAGE), and having a fully defined sequence of 306 amino acids as given in
 CC   the specification, and second subunit having a molecular weight of 35 kDa
 CC   as determined by (SDS-PAGE). Also described are: a novel cytokine protein
 CC   called Cytokine lymphocyte maturation factor (CLMF) or interleukin-12 (IL
 CC   -12) synthesised by mammalian cells, particularly human NC-37 B
 CC   lymphoblastoid cells, and capable of stimulating T-cell growth; and
 CC   monoclonal antibodies directed against (CLMF). (I) is useful as a
 CC   pharmaceutical composition which is active in a T cell growth factor
 CC   assay. This sequence encodes human cytotoxic lymphocyte maturation factor
 CC   (CLMF) 40 kDa subunit.

 PT   Nucleic acid constructs encoding interleukin-12 fusion proteins useful
 PT   for treating leukemia and other cancers.
 XX
 PS   Example; Fig 9; 73pp; English.
 XX
 CC   This sequence encodes the human p40 protein sequence. The invention
 CC   relates to an isolated nucleic acid construct (I) comprising a region
 CC   encoding an interleukin-12 (IL-12) fusion protein (comprising an IL-12
 CC   p35 subunit, an IL-12 p40 subunit and a linker peptide (joining the
 CC   subunits)) and a region encoding a B7 protein. (I) may be used to produce
```

IL-12 fusion proteins according to standard recombinant DNA methodologies. The fusion proteins may be produced either in vitro in a fermentation culture or in vivo as part of a gene therapy protocol (in this case (I) is used to transform a patients cells, which then secrete the functional polypeptide to supplement the patients own production of IL-12 or to rectify mutations which lead to the expression of inactive polypeptides). The fusion proteins produced in this way may be used to treat any disease which responds to IL-12 such as tumours (both solid and dispersed of the kidney, breast, colon, ovarian and cervical tumours and melanomas) and in particular, tumours of the blood such as leukaemia. Alternatively, the polypeptides may be used as antigens in the production of antibodies to IL-12 and to assay for agonists and antagonists of its activity. The antibodies and antagonists may be used to inhibit the activity of IL-12. (I) may also be used diagnostically as a probe which hybridizes to sequences encoding IL-12 and the antibodies may be used to detect the presence of IL-12 polypeptides in samples. They may be used diagnostically to quantitate the expression of the polypeptide by patients and hence which subjects may be in need of restorative therapy

Monitoring multiple sclerosis patient taking beta-interferon or glatiramer acetate to predict treatment response by determining expression profile of inflammatory nucleic acids using RNA of patient and comparing to control.

PT
XX
PS Claim 1; SEQ ID NO 22; 73pp; English.
XX
CC The present invention relates to gene expression profiling technology to
CC quantatively measure the expression profiles of genes selected based on
CC their role in inflammation and their susceptibility to regulation by
CC current multiple sclerosis (MS) treatment agents by isolating RNA from
CC peripheral blood mononuclear cells (PBMC) of patient. The invention is
CC particularly useful for monitoring a multiple sclerosis patient taking
CC interferon-beta (IFN-beta) or glatiramer acetate (GA) in order to predict
CC treatment response. The present sequence is human interleukin-12 40 kDa
CC (IL-12 p40) subunit gene. This gene is used to illustrate the evaluation
CC of PBMC responses to in Vitro treatment with IFN-beta or GA agents by
CC gene expression profiling technology.

Recombinant adenovirus expressing human interleukin-12 and its preparation and use.

Example 3; Fig 4; 27pp; Chinese.

The present invention describes a recombinant adenovirus and its preparation and use, as well as medicine composite containing the recombinant adenovirus. The recombinant adenovirus is used clinically, has the advantages of low cost, easy use and high efficiency and is especially suitable for immune treatment of tumour and infectious diseases caused by bacteria, virus and parasite. The present sequence represents human interleukin 2 (IL-2) cDNA which encodes the p35 and p40 proteins, which is used in an example from the present invention

Hybrid adenoviral gene expression vector for treating cancer, comprises adenovirus liberation system, alpha virus derived vector and specific tumoral promoter.

Disclosure; SEQ ID NO 13; 149pp; Spanish.

The invention relates to a novel adenovirus/alphavirus hybrid vector used in the expression of therapeutic genes in tumor cells. The vector comprises: a first chain of adenoviral origin containing a first inverted terminal repeated sequence and a signal sequence for packing the

CC adenovirus; a first non-coding filler sequence; a sequence corresponding
CC to a specific tissue promoter; an alpha virus-derived cDNA chain, the
CC sequence of which is in part complementary to an alpha viral RNA,
CC comprising at least one sequence coding for at least one exogenous gene
CC of interest, a polyadenylation sequence and a second adenoviral ITR
CC sequence. The invention further includes pharmaceutical compositions
CC containing the vector. The novel vector is used to transfer genetic
CC material to a cell, preferably a tumoral cell, especially one which
CC expresses an alfa fetoprotein (AFP). The vector is used to prepare drugs
CC for treating tumors. The vector or pharmaceutical compositions containing
CC them can be used to induce an immune response against foreign antigens.
CC This gene therapy method can be used to treat cancer. This polynucleotide
CC represents a human interleukin-12 DNA sequence used in the construction
CC of a novel vector of the invention.

XX

The present invention relates to a polypeptide comprising an antiangiogenesis polypeptide region linked to a therapeutic protein or polypeptide region, or a diagnostic protein or polypeptide region. The polypeptide comprising an antiangiogenesis polypeptide region or the nucleic acid encoding the polypeptide comprising the antiangiogenesis polypeptide is useful for diagnosing or treating angiogenesis-dependent diseases or cancer. Angiogenesis-dependent diseases include age-related macular degeneration, artherosclerosis, angiofibroma, neovascular glaucoma, arteriovenous malformations, nonunion fractures, arthritis, rheumatoid arthritis, lupus, connective tissue disorders, Osler-Weber syndrome, psoriasis, corneal graft neovascularisation, pyogenic granuloma, delayed wound healing, retrolental fibroplasia, diabetic retinopathy, scleroderma, granulations, haemangioma, trachoma, haemophilic joints, vascular adhesions, hypertrophic scars, multiple sclerosis, restenosis or obesity. The present sequence is a coding sequence shown in the exemplification of the invention

Computational Analysis of Full-Length Mouse cDNAs Compared with Human Genome Sequences Mamm. Genome. 12, 673-677 (2001)
Normalization and subtraction of cap-trapper-selected cDNAs to prepare full-length cDNA libraries for rapid discovery of new genes. Genome Res. 10 (10), 1617-1630 (2000)
RIKEN integrated sequence analysis (RISA) system--384-format sequencing pipeline with 384 multicapillary sequencer. Genome Res. 10 (11), 1757-1771 (2000)
Computer-based methods for the mouse full-length cDNA encyclopedia: real-time sequence clustering for construction of a nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001)
cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues.
Tissues were provided by David A. Hume (Depts. of Biochemistry and Microbiology/Parasitology Institute for Molecular Bioscience University of Queensland Brisbane,Q 4072 Australia) whose assistance we gratefully acknowledge.
Please visit our web site (http://genome.gsc.riken.go.jp) for further details.

Ovarian tissue (whole ovary, dissected follicles, or corpora lutea) was collected from crossbred pigs (Sus scrofa domestica), frozen in liquid nitrogen shortly after collection, and stored at -80 degrees Celsius until RNA extraction. The tissue from several individual pigs was pooled for the purpose of RNA extraction. The specific tissues collected were fetal whole ovary; neonatal whole ovary; prepubutal whole ovary; 2, 4, 6 and 8 mm growing follicles; Day 0 follicles; Day 5 small antral follicles and corpora lutea; Day 12 corpora lutea and Day 12 follicles. More information regarding the methods can be found at:
http://genome.rnet.missouri.edu/Swine/Methods.html.
Library Construction (Standard Protocol): All procedures discussed in this section have been described in detail elsewhere (Soares et al., 1994; Bonaldo et al., 1996; Jiang et al., 2001). Total cellular RNA from each sample was isolated by using STAT-60 reagent (Tel-Test, Friendswood, TX) and the poly(A)+ RNA was obtained by two rounds of purification with the Oligotex mRNA isolation kit (Qiagen) according to the manufacturer's instructions. The libraries were constructed essentially as described by the manufacturer's instructions provided with the SuperScript Plasmid System (Invitrogen, cat. no. 18248-013). Briefly, 1mg of poly(A)+ RNA will be annealed at 37 degrees Celsius with 10mg of NotI-tag-dT18 oligonucleotide (GCTGCTCGCGGCCGC-tag-T18) and reverse transcribed at 37 degrees Celsius with SuperScript II (Invitrogen) reverse transcriptase (Jiang et al., 2001). The 'tag' represents a tissue/stage-specific ten-base sequence identifier (http://genome.uiowa.edu/pubsoft/software.html) present in the oligonucleotide used to prime first-strand synthesis. Second strand synthesis was performed with T4 DNA polymerase in the presence of DNA ligase and RNase H. After second strand synthesis, the double-stranded cDNAs was ligated to SalI adapters (Invitrogen-Life Technologies) and digested with NotI. The cDNAs will be size selected by passage through cDNA size fractionation columns (Invitrogen-Life technologies). The cDNAs derived from each developmental stage of a particular tissue were mixed on an equimolar basis and ligated directionally into the NotI and SalI sites of the pSPORT1 vector (Invitrogen). After ligation of the inserts, the plasmids will be electroporated into DH10B bacteria. Preliminary Library Characterization: Randomly chosen clones from each library were analyzed by restriction digestion to determine average insert size (96 clones) and by sequencing (~4 96-well plates) to confirm library quality [e.g. the presence of short polyA+ tails, genomic DNA contamination (must be <1%), ribosomal RNA clones (must be <1%), etc.] and to provide a sequence database representing the predominant clones in each library. The clones were sequenced at the University of Missouri-Columbia DNA Core Facility. Bioinformatics work was performed by GK Springer's bioinformatics group (WG Spollen, JE Ries, A Guillen, AA Khambati, RV Patel, CM Topinka, SB Bhuiyan) in Computer Science and Health Management and Informatics Departments at the University of Missouri-Columbia. Clone Requests: Requests for clones should be made to the Director of the University of Missouri DNA Core facility at: porcine@rnet.missouri.edu. Citations: 1. Bonaldo MF, Lennon G, Soares MB. Normalization and Subtraction: Two approaches to facilitate gene discovery. Genome Res, 1996; 6:791-806. 2. cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues.
Tissues were provided by David A. Hume (Depts. of Biochemistry and Microbiology/Parasitology Institute for Molecular Bioscience University of Queensland Brisbane,Q 4072 Australia) whose assistance we gratefully acknowledge.
Please visit our web site (http://genome.gsc.riken.go.jp) for further details.

                     /clone_lib="Mouse 10kb plasmid UUGC1M library"
                     /note="Vector: PWD42nv; Purified genomic DNA from M.
                     musculus C57BL/6J (male) was obtained  from the Jackson
                     Laboratory Mouse DNA Resource
                     (http://www.jax.org/resources/documents/dnares/). The DNA
                     was hydrodynamically sheared by repeated passage through a
                     0.005 inch orifice at constant velocity. The sheared DNA
                     was blunt end-repaired with T4 DNA polymerase and T4
                     polynucleotide kinase. Adaptor oligonucleotides were
                     ligated to the blunt ends in high  molar excess. The
                     adaptored DNA was purified and size-selected for a 9.5 to
                     10.5 kb range using preparative agarose gel
                     electrophoresis. Vector DNA was prepared from a derivative
                     of pWD42 (gi|4732114|gb|AF129072.1), a copy-number
                     inducible derivative of plasmid R1. The vector was ligated
                     with adaptors complementary to the insert adaptors and
                     purified. The sheared, adaptored mouse DNA was annealed to
                     adaptored vector DNA, and transformed into
                     chemically-competent E. coli XL10-Gold (Stratagene) cells
                     and selected for ampicillin resistance."

```

encyclopedia: real-time sequence clustering for construction of a nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001)
cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues.
Tissues were provided by Dr. John Todd (Dept. of Medical Genetics Wellcome Trust Centre for Molecular Mechanisms in Disease Wellcome Trust/MRC building Addenbrookes Hospital Cambridge) whose assistance we gratefully acknowledge.
Please visit our web site (http://genome.gsc.riken.go.jp) for further details.

                     Laboratory Mouse DNA Resource
```

(http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gi|4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

        Gaston Cremieux, 91057 Evry cedex, FRANCE
MENT    PCR was performed on DNA from transformants of Arabidopsis thaliana
        plants from INRA (Versailles). The DNA fragment(s) resulting from
        the PCR were directly sequenced from the left or the right border
        to determine the genomic sequence flanking the insertion. T-DNA
        derived sequences were removed. Information to order the
        corresponding mutant line and a link to a database providing a
        graphical display of the insertion site are available at
        http://dbsgap.versailles.inra.fr/publiclines/. This sequence has
        been generated in the framework of the French plant genomics
        program 'Genoplante' (http://www.genoplante.com and
        http://genoplante-info.infobiogen.fr).

                with a modified polylinker; Site_1: EcoR I; Site_2: Not I;
                NCI_CGAP_Ch1 is a cDNA library containing the following
                tissue(s): Chondrosarcoma Grade II. The library was
                constructed according to Bonaldo, Lennon and Soares,
                Genome Research, 6:791-806, 1996. First strand cDNA
                synthesis was primed with an oligo-dT primer containing a
                Not I site. Double stranded cDNA was ligated to an EcoR I
                adaptor, digested with Not I, and cloned directionally
                into pT7T3-Pac vector. The oligonucleotide used to prime
                the synthesis of first-strand cDNA contains a library tag
                sequence that is located between the Not I site and the
                (dT)18 tail. The sequence tag for this library is
                TGATCACGCT.

```

derived from a pool of mRNA obtained from 4 cell lines
from grade III chondrosarcoma tissues. The library was
constructed according to Bonaldo, Lennon and Soares,
Genome Research, 6:791-806, 1996. First strand cDNA
synthesis was primed with an oligo-dT primer containing a
Not I site. Double stranded cDNA was ligated to an EcoR I
adaptor, digested with Not I, and cloned directionally
into pT7T3-Pac vector. The oligonucleotide used to prime
the synthesis of first-strand cDNA contains a library tag
sequence that is located between the Not I site and the
(dT)18 tail. The sequence tag for this library is
GAGGTCGGTG. The cell lines were provided by Dr. James
Martin from the University of Iowa.
TAG_TISSUE=Human Chondrosarcoma Grade 3 cell line mix
TAG_LIB=UI-H-FL1
TAG_SEQ=GAGGTCGGTG"

                     /note="Organ: kidney + adrenal; Vector: pBluescript II
                     KS(+); Site_1: EcoRI; Site_2: Not1; This normalized
                     library was constructed from 1 million independent clones.
                     cDNA synthesis was initiated using an oligo(dT) primer,
                     using methylated C in the first strand synthesis reaction.
                     Following this first strand reaction, double-stranded cDNA
                     was blunted, ligated to NotI adapters, digested with
                     EcoRI, size-selected, and cloned into the NotI and EcoRI
                     compatible sites of a custom modified MCS of the
                     pBluescript (KS+) vector. The library was normalized in 2
                     rounds using conditions adapted from Soares et al., PNAS
                     (1994) 91: 9228-9232 and Bonaldo et al., Genome Research 6
                     (1996): 791, except that a significantly longer
                     reannealing hybridization was used."

                    /clone_lib="Hordeum vulgare seedling shoot EST library
                    HVcDNA0003 (Etiolated and unstressed)"
                    /note="Vector: lambdaZAP; Site_1: EcoR1; Site_2: Xho1;
                    Seeds were surface sterilized then germinated under axenic
                    conditions in the dark at room temperature on filter paper
                    with water, nystatin and cefotaxime in covered
                    crystallization dishes. Five-day old seedling shoots were
                    then harvested, total RNA was prepared, poly(A) RNA was
                    purified, one primary unamplified cDNA library was made,
                    and 1 million pfu were in vivo excised to give pBluescript
                    SK(-) cDNA phagemids. These steps were performed in the TJ
                    Close laboratory at the University of California,
                    Riverside (Choi, Close, Fenton). Phagemids were plated and
                    picked at the Clemson University Genomics Institute (CUGI)
                    (Begum, Palmer, Frisch, Atkins and Wing). Plasmid DNA
                    preparations, DNA sequencing and sequence analysis were
                    performed at CUGI (Wing, Yu, Frisch, Henry, Simmons,
                    Oates, Rambo, Main). The sequence has been trimmed to
                    remove vector sequence and contains a minimum of 100 bases
                    of phred value 20 or above. For more details on library
                    preparation and sequence analysis see
                    http://www.genome.clemson.edu/projects/barley. To order
                    this clone see http://www.genome.clemson.edu/orders Also

                    provided by funds dedicated to J.P.RENARD (BDR, Inra).
                    Funding for construction and subtraction of the cDNA
                    library was provided by USDA ARS contract No 58-1275-2-020
                    to H. A. Lewin The cDNA library was constructed,
                    normalized and subtracted by Dr. A. Hernandez (W.M. Keck
                    Center, University of Illinois Urbana-Champaign) and S.
                    Degrelle (BDR, Inra) as described in Bonaldo et al.(1996),
                    Genome Research 6, 791-806. BE03 library is a normalized
                    library of embryonic tissues subtracted with 7800 known
                    EST sequences. The double-stranded cDNA was size selected
                    (>450 bp), adaptored with EcoRI adaptors at both ends and
                    digested with NotI. The cDNA was then directionally cloned
                    into EcoRI-NotI digested pGEM11Zf(+) phagemid vector.
                    Insert size was between 450-2200 bp. Tagged oligo-dT was
                    used to identify the origin of the ESTs where possible.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RESULT 1
US-09-917-265-55
; Sequence 55, Application US/09917265
; Patent No. US20020052030A1
; GENERAL INFORMATION:
;  APPLICANT: Wonderling, Ramani S.
;  APPLICANT:  Boroughs, Karen L.
;  TITLE OF INVENTION: CANINE AND FELINE PROTEINS, NUCLEIC ACID MOLECULES AND USES THERE
;  FILE REFERENCE: IM-5
;  CURRENT APPLICATION NUMBER: US/09/917,265
;  CURRENT FILING DATE:  2001-07-27
;  PRIOR APPLICATION NUMBER: 60/223,016
;  PRIOR FILING DATE: 2000-08-04
;  NUMBER OF SEQ ID NOS: 109
;  SOFTWARE: PatentIn version 3.1
; SEQ ID NO 55
```

```
 LENGTH: 985
 TYPE: DNA
 ORGANISM: Felis catus
 FEATURE:
 NAME/KEY: CDS

  TITLE     Direct Submission
  JOURNAL   Submitted (10-AUG-2001) Berkeley Drosophila Genome Project,
            Lawrence Berkeley National Laboratory, One Cyclotron Road,
            Berkeley, CA 94720, USA
COMMENT     Sequence submitted by:
            Berkeley Drosophila Genome Project
            Lawrence Berkeley National Laboratory
            Berkeley, CA 94720
            This clone was sequenced as part of a high-throughput process to
            sequence clones from Drosophila Gene Collection 1 (Rubin et al.,
            Science 2000). The sequence has been subjected to integrity checks
            for sequence accuracy, presence of a polyA tail and contiguity
            within 100 kb in the genome. Thus we believe the sequence to
            reflect accurately this particular cDNA clone.  However, there are
            artifacts associated with the generation of cDNA clones that may
            have not been detected in our initial analyses such as internal
            priming, priming from contaminating genomic DNA, retained introns
            due to reverse transcription of unspliced precursor RNAs, and
            reverse transcriptase errors that result in single base changes.
            For further information about this sequence, including its location
            and relationship to other sequences, please visit our Web site
            (http://fruitfly.berkeley.edu) or send email to
            cdna@fruitfly.berkeley.edu.

New nucleic acid molecule comprising a sequence encoding a feline p35 or
p40 subunit protein and a nucleic acid linker, useful in preparing a
vaccine against infectious diseases in feline animals.

Claim 24; SEQ ID NO 38; 103pp; English.

The present invention relates to the feline interleukin (IL)-12p35 or p40
subunit protein and their encoding nucleic acid molecules and a nucleic
acid linker. The invention also provides the feline caspase (casp)-1,
feline IL-18 single chain and canine IL-12 single chain proteins and
their nucleic acid molecules. The nucleic acid molecule is useful in
preparing a vaccine against infectious diseases in feline animals. The
present sequence is the feline single chain IL-12 protein encoding cDNA.

                    /note="Vector: PWD42nv; Purified genomic DNA from M.
                    musculus C57BL/6J (male) was obtained  from the Jackson
                    Laboratory Mouse DNA Resource
                    (http://www.jax.org/resources/documents/dnares/). The DNA
                    was hydrodynamically sheared by repeated passage through a
                    0.005 inch orifice at constant velocity. The sheared DNA
                    was blunt end-repaired with T4 DNA polymerase and T4
                    polynucleotide kinase. Adaptor oligonucleotides were
                    ligated to the blunt ends in high  molar excess. The
                    adaptored DNA was purified and size-selected for a 9.5 to
                    10.5 kb range using preparative agarose gel
                    electrophoresis. Vector DNA was prepared from a derivative
                    of pWD42 (gi|4732114|gb|AF129072.1), a copy-number
                    inducible derivative of plasmid R1. The vector was ligated
                    with adaptors complementary to the insert adaptors and
                    purified. The sheared, adaptored mouse DNA was annealed to
                    adaptored vector DNA, and transformed into
                    chemically-competent E. coli XL10-Gold (Stratagene) cells
                    and selected for ampicillin resistance."

  ITLE      Direct Submission
  OURNAL    Submitted (16-JUL-2001) Yoshihide Hayashizaki, The Institute of
            Physical and Chemical Research (RIKEN), Laboratory for Genome
            Exploration Research Group, RIKEN Genomic Sciences Center (GSC),
            RIKEN Yokohama Institute; 1-7-22 Suehiro-cho, Tsurumi-ku, Yokohama,
            Kanagawa, 230-0045, Japan (E-mail:genome-res@gsc.riken.jp,
            URL:http://genome.gsc.riken.jp/, Tel:81-45-503-9222,
            Fax:81-45-503-9216)
  ENT       cDNA library was prepared and sequenced in Mouse Genome
            Encyclopedia Project of Genome Exploration Research Group in Riken
            Genomic Sciences Center and Genome Science Laboratory in RIKEN.
            Division of Experimental Animal Research in Riken contributed to
            prepare mouse tissues.
            Please visit our web site for further details.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

TITLE Direct Submission

JOURNAL Submitted (30-MAR-2004) Yoshihide Hayashizaki, The Institute of Physical and Chemical Research (RIKEN), Laboratory for Genome Exploration Research Group, RIKEN Genomic Sciences Center (GSC), RIKEN Yokohama Institute; 1-7-22 Suehiro-cho, Tsurumi-ku, Yokohama, Kanagawa, 230-0045, Japan (E-mail:genome-res@gsc.riken.jp, URL:http://genome.gsc.riken.jp/, Tel:81-45-503-9222, Fax:81-45-503-9216)

COMMENT cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues.
Tissues were provided by Dr. John Todd (Dept. of Medical Genetics Wellcome Trust Centre for Molecular Mechanisms in Disease Wellcome Trust/MRC building Addenbrookes Hospital Cambridge) whose assistance we gratefully acknowledge.
Please visit our web site for further details.

Feline interleukin 18 (IL-18), feline caspase-1, feline IL-12 single chain and canine IL-12 single chain proteins, useful for treating and preventing autoimmune diseases, inflammatory diseases and/or graft rejection in animals.

Claim 1; Page 56-57; 106pp; English.

The present invention discloses new feline interleukin 18 (IL-18), feline caspase-1, feline IL-12 single chain and canine IL-12 single chain proteins. A composition comprising a feline IL-18, feline caspase-1, feline IL-12 single chain or canine IL-12 single chain proteins, a nucleic acid encoding these proteins, mimetopes of these proteins, multimeric forms of these proteins, an antibody against these proteins, or an inhibitor identified by its ability to inhibit the activity of these proteins, can be used to treat or prevent autoimmune diseases, allergic reactions, infectious diseases, tumour development, inflammatory diseases and/or graft rejection in animals. The present nucleic acid sequence represents a feline interleukin 12 DNA sequence, as described in the invention

CC The present invention discloses new feline interleukin 18 (IL-18), feline
CC caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC proteins. A composition comprising a feline IL-18, feline caspase-1,
CC feline IL-12 single chain or canine IL-12 single chain proteins, a
CC nucleic acid encoding these proteins, mimetopes of these proteins,
CC multimeric forms of these proteins, an antibody against these proteins,
CC or an inhibitor identified by its ability to inhibit the activity of
CC these proteins, can be used to treat or prevent autoimmune diseases,
CC allergic reactions, infectious diseases, tumour development, inflammatory
CC diseases and/or graft rejection in animals. The present nucleic acid
CC sequence represents a feline interleukin 12 DNA sequence, as described in
CC the invention

New nucleic acid molecule comprising a sequence encoding a feline p35 or p40 subunit protein and a nucleic acid linker, useful in preparing a vaccine against infectious diseases in feline animals.

Claim 23; SEQ ID NO 32; 103pp; English.

The present invention relates to the feline interleukin (IL)-12p35 or p40 subunit protein and their encoding nucleic acid molecules and a nucleic acid linker. The invention also provides the feline caspase (casp)-1, feline IL-18 single chain and canine IL-12 single chain proteins and their nucleic acid molecules. The nucleic acid molecule is useful in preparing a vaccine against infectious diseases in feline animals. The present sequence is the feline single chain IL-12p35 subunit protein encoding full-length cDNA.

Claim 6; Page 63-64; 106pp; English.

The present invention discloses new feline interleukin 18 (IL-18), feline caspase-1, feline IL-12 single chain and canine IL-12 single chain proteins. A composition comprising a feline IL-18, feline caspase-1, feline IL-12 single chain or canine IL-12 single chain proteins, a nucleic acid encoding these proteins, mimetopes of these proteins, multimeric forms of these proteins, an antibody against these proteins, or an inhibitor identified by its ability to inhibit the activity of these proteins, can be used to treat or prevent autoimmune diseases, allergic reactions, infectious diseases, tumour development, inflammatory diseases and/or graft rejection in animals. The present nucleic acid sequence represents a feline interleukin 12 DNA sequence, as described in the invention

New nucleic acid molecule comprising a sequence encoding a feline p35 or p40 subunit protein and a nucleic acid linker, useful in preparing a vaccine against infectious diseases in feline animals.

Example 3; SEQ ID NO 45; 103pp; English.

The present invention relates to the feline interleukin (IL)-12p35 or p40 subunit protein and their encoding nucleic acid molecules and a nucleic acid linker. The invention also provides the feline caspase (casp)-1, feline IL-18 single chain and canine IL-12 single chain proteins and their nucleic acid molecules. The nucleic acid molecule is useful in preparing a vaccine against infectious diseases in feline animals. The present sequence is the feline single chain IL-12 complementary DNA.

New nucleic acid molecule comprising a sequence encoding a feline p35 or p40 subunit protein and a nucleic acid linker, useful in preparing a vaccine against infectious diseases in feline animals.

Claim 24; SEQ ID NO 38; 103pp; English.

The present invention relates to the feline interleukin (IL)-12p35 or p40 subunit protein and their encoding nucleic acid molecules and a nucleic acid linker. The invention also provides the feline caspase (casp)-1, feline IL-18 single chain and canine IL-12 single chain proteins and their nucleic acid molecules. The nucleic acid molecule is useful in preparing a vaccine against infectious diseases in feline animals. The present sequence is the feline single chain IL-12 protein encoding cDNA.

Sequence 1599 BP; 460 A; 402 C; 380 G; 357 T; 0 U; 0 Other;

   Novel feline cytokine protein - useful for treating feline auto:immune
   diseases, e.g. those caused by feline herpes virus or feline calcivirus.

   Claim 23; Page 59; 94pp; Japanese.

   This sequence encodes a novel feline cytokine mature protein, FLAFp35.
   This protein can be used in the production of a FLAFp35/FLAFp40
   heterodimer which can potentiate the cytotoxic activity of feline
   cytotoxic T lymphocyte cells. Such proteins are used for treatment of
   feline autoimmune diseases e.g. as caused by feline herpes virus or
   feline calcivirus

PS Claim 22; Page 57-58; 94pp; Japanese.
XX
CC This sequence encodes a novel feline cytokine protein, FLAFp35. This
CC protein can be used in the production of a FLAFp35/FLAFp40 heterodimer
CC which can potentiate the cytotoxic activity of feline cytotoxic T
CC lymphocyte cells. Such proteins are used for treatment of feline
CC autoimmune diseases e.g. as caused by feline herpes virus or feline
CC calcivirus

   Feline interleukin 18 (IL-18), feline caspase-1, feline IL-12 single
   chain and canine IL-12 single chain proteins, useful for treating and
   preventing autoimmune diseases, inflammatory diseases and/or graft
   rejection in animals.

   Disclosure; Page 92-93; 106pp; English.

   The present invention discloses new feline interleukin 18 (IL-18), feline
   caspase-1, feline IL-12 single chain and canine IL-12 single chain
   proteins. A composition comprising a feline IL-18, feline caspase-1,
   feline IL-12 single chain or canine IL-12 single chain proteins, a
   nucleic acid encoding these proteins, mimetopes of these proteins,
   multimeric forms of these proteins, an antibody against these proteins,
   or an inhibitor identified by its ability to inhibit the activity of
   these proteins, can be used to treat or prevent autoimmune diseases,
   allergic reactions, infectious diseases, tumour development, inflammatory
   diseases and/or graft rejection in animals. The present nucleic acid
   sequence represents a feline interleukin 12 DNA sequence, as described in
   the invention

XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the feline N-terminal single chain IL-12p35 subunit
CC   protein complementary DNA.

Recombinant feline interleukin-12, useful as immunostimulant and for treating e.g. viral infections in cats, and related nucleic acid constructs.

Disclosure; Fig 2; 35pp; German.

This invention describes a novel feline interleukin-12 (fIL-12) polypeptide (I) that is expressed, by recombinant gene expression in eukaryotic or prokaryotic cells, in the form of both polypeptide chains of subunits p35 and p40. These proteins are formed so that, in equimolar concentrations and in presence of an immunizing antigen, they can be administered to carnivores, particularly domestic cats. The invention also describes a nucleic acid construct (II) encoding fIL-12 containing sequences at least 95% identical with the p40- and p35-encoding sequences (A, 990 bp and B, 669 bp respectively), reproduced in the specification, as immunostimulants for immunization against infectious diseases and/or for treating infections or tumors in felines, especially domestic cats. The products of the invention have immunostimulatory, antiviral and antitumor activity. Nucleic acid constructs that encode (II) are useful as adjuvants for prophylactic immunization against viral diseases and for treating diseases associated with a Th1 defect. IL-12 induces synthesis of interferon gamma (Th1 response). The feline interleukin-12 polypeptide is useful for carnivores, and particularly domestic cats in the following: (i) as immunostimulant, for preventative or therapeutic use; and (ii) treating tumors and autoimmune diseases, or diseases associated with a Th1 defect, especially pre-existing infections by feline immune deficiency virus (FIV), feline leukemia virus and corona virus

Recombinant feline interleukin-12, useful as immunostimulant and for treating e.g. viral infections in cats, and related nucleic acid constructs.

Disclosure; Fig 2; 35pp; German.

This invention describes a novel feline interleukin-12 (fIL-12) polypeptide (I) that is expressed, by recombinant gene expression in eukaryotic or prokaryotic cells, in the form of both polypeptide chains of subunits p35 and p40. These proteins are formed so that, in equimolar concentrations and in presence of an immunizing antigen, they can be administered to carnivores, particularly domestic cats. The invention also describes a nucleic acid construct (II) encoding fIL-12 containing sequences at least 95% identical with the p40- and p35-encoding sequences (A, 990 bp and B, 669 bp respectively), reproduced in the specification, as immunostimulants for immunization against infectious diseases and/or for treating infections or tumors in felines, especially domestic cats. The products of the invention have immunostimulatory, antiviral and antitumor activity. Nucleic acid constructs that encode (II) are useful as adjuvants for prophylactic immunization against viral diseases and for treating diseases associated with a Th1 defect. IL-12 induces synthesis of interferon gamma (Th1 response). The feline interleukin-12 polypeptide is useful for carnivores, and particularly domestic cats in the following: (i) as immunostimulant, for preventative or therapeutic use; and (ii) treating tumors and autoimmune diseases, or diseases associated with a Th1 defect, especially pre-existing infections by feline immune deficiency virus (FIV), feline leukemia virus and corona virus

PT promoter.
XX
PS Claim 14; Page 37; 37pp; German.
XX
CC This invention describes a novel vaccine (A) for prevention or treatment
CC of lentivirus infection in felines which comprises an immunizing nucleic
CC acid sequence (I) that contains, or comprises, at least part of a gene
CC encoding a protein (II) of the virus, under control of a eukaryotic
CC promoter functional in the relevant animal. (II) is especially the
CC envelope (env) protein. The invention also describes (1) vaccine (A)
CC containing an immunizing protein, or fragment, from a lentivirus plus at
CC least one of interleukin (IL)-12 and/or -16; and (2) preparation of a
CC lentivirus protein, or fragment, especially derived from feline immune
CC deficiency virus (FIV), by expressing the corresponding nucleic acid
CC sequence in a host cell. The products of the invention have antiviral
CC activity. The vaccine (A) and related protein-based vaccines, are
CC particularly used to treat or prevent lentivirus infections in domestic
CC cats, especially feline immune deficiency virus (FIV). Vaccination with
CC (A) allows differentiation between vaccinated and infected animals, from
CC the antibody status. The vaccines may be formulated with an adjuvant
CC (particularly interleukin-12 and/or IL-16) that elicits a cytotoxic
CC immune response, particularly a Th1 response

Canine cytokine protein which activates canine cytotoxic T lymphocytes - is useful for treatment of viral and autoimmune diseases in dogs.

Claim 8; Page 34-35; 51pp; Japanese.

This sequence encodes the canine lymphocyte activation factor (CLAF) of the invention. CLAF activates lymphocytes, especially canine cytotoxic T cells. The protein contains a p35 and a p40 subunit. CLAF or antibodies recognising it may be used in the treatment of viral diseases in dogs (such as canine distemper, canine parvovirus and canine infectious hepatitis). The antibodies may also be used in isolation of CLAF from culture of the transformant host cells by affinity chromatography. The p40 homodimer can be used for the treatment of autoimmune diseases in dogs

A prevention and treating agent containing interleukin 12 (CaIL12) - for prevention and treatment of dog and cat immune diseases.

Claim 1; Page 13; 16pp; Japanese.

The present sequence encodes canine interleukin-12 (IL-12). The specification describes a method for the prevention and treatment of dog and cat immune diseases. The treatment used an agent comprising dog IL-12 (CaIL12) proteins to form a heterodimer. The agent is useful for preventing and treating dog and cat immune diseases, including tumours, skin diseases, infectious diseases and allergic diseases

PT Large scale production of interleukin-12 for pharmaceutical applications,
PT comprises infecting an insect cell with a recombinant virus containing
PT gene encoding IL-12, and producing IL-12 by carrying out spinner culture
PT of insect cell.

Example; SEQ ID NO 6; 8pp; Japanese.

The invention related to the large scale production of interleukin-12 (IL -12), which involves infecting an insect cell with a recombinant virus containing a gene encoding IL-12, and producing IL-12 by carrying out spinner culture of insect cell. The method is useful for producing IL-12, preferably canine IL-12. IL-12 has pharmaceutical applications. The present sequence encodes canine IL-12 P35, which is used in the exemplification of the present invention.

Canine cytokine protein which activates canine cytotoxic T lymphocytes - is useful for treatment of viral and autoimmune diseases in dogs.

Claim 8; Page 33-34; 51pp; Japanese.

This sequence encodes the canine lymphocyte activation factor (CLAF) of the invention. CLAF activates lymphocytes, especially canine cytotoxic T cells. The protein contains a p35 and a p40 subunit. CLAF or antibodies recognising it may be used in the treatment of viral diseases in dogs (such as canine distemper, canine parvovirus and canine infectious hepatitis). The antibodies may also be used in isolation of CLAF from culture of the transformant host cells by affinity chromatography. The p40 homodimer can be used for the treatment of autoimmune diseases in dogs

PT rejection in animals.
XX
PS Claim 6; Page 86-87; 106pp; English.
XX
CC The present invention discloses new feline interleukin 18 (IL-18), feline
CC caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC proteins. A composition comprising a feline IL-18, feline caspase-1,
CC feline IL-12 single chain or canine IL-12 single chain proteins, a
CC nucleic acid encoding these proteins, mimetopes of these proteins,
CC multimeric forms of these proteins, an antibody against these proteins,
CC or an inhibitor identified by its ability to inhibit the activity of
CC these proteins, can be used to treat or prevent autoimmune diseases,
CC allergic reactions, infectious diseases, tumour development, inflammatory
CC diseases and/or graft rejection in animals. The present nucleic acid
CC sequence represents a canine interleukin 12 DNA sequence, as described in
CC the invention

New nucleic acid molecule comprising a sequence encoding a feline p35 or p40 subunit protein and a nucleic acid linker, useful in preparing a vaccine against infectious diseases in feline animals.

Example 4; SEQ ID NO 68; 103pp; English.

The present invention relates to the feline interleukin (IL)-12p35 or p40 subunit protein and their encoding nucleic acid molecules and a nucleic acid linker. The invention also provides the feline caspase (casp)-1, feline IL-18 single chain and canine IL-12 single chain proteins and their nucleic acid molecules. The nucleic acid molecule is useful in preparing a vaccine against infectious diseases in feline animals. The present sequence is the canine single chain IL-12 complementary DNA.

Novel gene vector for expression in insect useful for expression of foreign gene such as dog interleukin 12 gene, comprises two promoters.

Claim 4; SEQ ID NO 8; 13pp; Japanese.

The invention relates to a novel gene vector for expression in an insect comprising at least two promoters, particularly the polyhedrin promoter and p10 promoter. The vector contains at least two types of foreign protein expression gene and the gene product of the vector is produced using a gene recombinant baculovirus, particularly a recombinant silkworm nuclear polyhedrosis virus. The baculovirus is proliferated in a silkworm. The vector of the invention may be useful for expression of a foreign gene, such as canine interleukin 12. Within the vector, two types of foreign protein expression genes are integrated simultaneously for their simultaneous expression. The current sequence is that of the canine interleukin-12 (IL-12) p35 DNA of the invention.

   Nucleic acid encoding ovine interleukin-5 or -12 - used as vaccine
   adjuvants and to treat or prevent microbial infections in livestock.

   Claim 8; Page 43-44; 78pp; English.

   The sequences given in AAT50757-59 encode ovine interleukin-12 (IL-12) 35
   kD subunit (partial and full length sequence) and the 40 kD subunit.
   Ovine IL-5 or IL-12 are used to treat and/or prevent infections in
   livestock (esp. cows and sheep), particularly where the animals are
   stressed, e.g. during transport. IL-5 and IL-12 can also be used as
   adjuvants in vaccines for veterinary use (partic. weakly immunogenic
   subunit or synthetic peptide vaccines). They may also be used to treat
   cancer, immunosuppression and allergy, to enhance/suppress the
   reproductive system and to promote growth or early maturity. Optionally
   interleukin can be delivered from constructs or delivery cells and
   antibodies are useful in enzyme immunoassays for rapid diagnosis of
   infection. The interleukins are immunopotentiators, especially IL-5
   promotes growth of early haematopoietic progenitor cells and generation
   of cytotoxic cells from thymocytes, also it stimulates production and
   secretion of IgM and IgA (in synergism with bacterial endotoxin). IL-12
   induces production of gamma-interferon by, and proliferation of, T and NK
   cells and increases the (non-)specific cytolytic lymphocyte response. The
   genetic constructs can also be used for in vitro production of IL-5 or -
   12. (Updated on 17-OCT-2003 to standardise OS field)

Identifying an individual who has an altered risk for developing myocardial infarction by detecting a single nucleotide polymorphism in the individual's nucleic acids.

Claim 7; SEQ ID NO 3487; 145pp; English.

The invention relates to a novel method for identifying an individual who has an altered risk for developing myocardial infarction. The method

CC comprises detecting a single nucleotide polymorphism (SNP) in any one of
CC the nucleotide sequences given in the specification in the individual's
CC nucleic acids, where the presence of the SNP is correlated with an
CC altered risk for myocardial infarction in the individual. The invention
CC further comprises: an isolated nucleic acid molecule comprising at least
CC 8 contiguous nucleotides where one of the nucleotides is an SNP given in
CC the specification or its complement and encoding any one of the amino
CC acid sequences given in the specification; an isolated polypeptide
CC comprising an amino acid sequence given in the specification; an antibody
CC that specifically binds to the polypeptide or its antigen-binding
CC fragment; an amplified polynucleotide containing an SNP given in the
CC specification and which is between about 16 and 1000 nucleotides in
CC length; a kit for detecting an SNP in a nucleic acid, comprising the
CC polynucleotide, a buffer and an enzyme; a method of detecting an SNP in a
CC nucleic acid molecule; a method of detecting a variant polypeptide; and a
CC method for identifying an agent useful in treating or preventing
CC myocardial infarction. The novel detection method has cardiant activity.
CC The nucleic acids of the invention may be used in gene therapy. The
CC method is useful in identifying an individual who has an increased or
CC decreased risk for developing myocardial infarction and for preparing a
CC composition for treating or preventing myocardial infarction. This
CC polynucleotide sequence represents a transcript-based context sequence
CC which flanks an SNP found in a human myocardial infarction-associated
CC gene of the invention. Note: This sequence was not shown in the
CC specification. The sequence has come from an electronic sequence listing
CC downloaded from the WIPO website.

PT Identifying an individual who has an altered risk for developing
PT myocardial infarction by detecting a single nucleotide polymorphism in
PT the individual's nucleic acids.
XX
PS Claim 7; SEQ ID NO 3496; 145pp; English.
XX
CC The invention relates to a novel method for identifying an individual who
CC has an altered risk for developing myocardial infarction. The method
CC comprises detecting a single nucleotide polymorphism (SNP) in any one of
CC the nucleotide sequences given in the specification in the individual's
CC nucleic acids, where the presence of the SNP is correlated with an
CC altered risk for myocardial infarction in the individual. The invention
CC further comprises: an isolated nucleic acid molecule comprising at least
CC 8 contiguous nucleotides where one of the nucleotides is an SNP given in
CC the specification or its complement and encoding any one of the amino
CC acid sequences given in the specification; an isolated polypeptide
CC comprising an amino acid sequence given in the specification; an antibody
CC that specifically binds to the polypeptide or its antigen-binding
CC fragment; an amplified polynucleotide containing an SNP given in the
CC specification and which is between about 16 and 1000 nucleotides in
CC length; a kit for detecting an SNP in a nucleic acid, comprising the
CC polynucleotide, a buffer and an enzyme; a method of detecting an SNP in a
CC nucleic acid molecule; a method of detecting a variant polypeptide; and a
CC method for identifying an agent useful in treating or preventing
CC myocardial infarction. The novel detection method has cardiant activity.

The nucleic acids of the invention may be used in gene therapy. The method is useful in identifying an individual who has an increased or decreased risk for developing myocardial infarction and for preparing a composition for treating or preventing myocardial infarction. This polynucleotide sequence represents a transcript-based context sequence which flanks an SNP found in a human myocardial infarction-associated gene of the invention. Note: This sequence was not shown in the specification. The sequence has come from an electronic sequence listing downloaded from the WIPO website.

A mammalian interferon alpha expression plasmid is useful in gene therapy to deliver interferon alpha to cells to modulate tumor activity in the treatment of cancer.

Disclosure; SEQ ID NO 27; 65pp; English.

The invention relates to a mammalian interferon alpha expression plasmid, comprising a promoter and a synthetic 5' intron transcriptionally linked with an interferon alpha coding sequence and a 3' untranslated region. The mammalian interferon alpha expression plasmid is useful for treating tumour growth. The present sequence is used in the exemplification of the present invention.

PT Novel protein comprising cytotoxic lymphocyte maturation factor in
PT substantially pure form or protein which exhibits cytotoxic lymphocyte
PT maturation factor activity, useful as antitumor and immunoenhancing
PT agent.
XX
PS Claim 20; Page 29; 74pp; English.

The invention relates to a protein which comprises a cytotoxic lymphocyte maturation factor (CLMF). The protein is useful for stimulating activated T-cells which involves treating T-cells with the protein. The method further involves treating the activated T-cells with IL2 or its biologically active fragment. The protein is useful for stimulating natural killer cells which involves treating the natural killer cells with the protein. The protein has immunoenhancing and antitumour effects when used as single therapeutic agent in vivo. The present sequence is used in the exemplification of the present invention.

Control of graft versus host disease using interleukin 12 - partic. admin. at the time of bone marrow transplant.

Disclosure; Page 23-24; 32pp; English.

AAQ97484 and AAQ97485 are from human lymphoblast cell line RMPI 8866. IL-12 is a heterodimeric cytokine which was originally identified as a factor which induces gamma-interferon from T cells and natural killer cells as set forth in PCT/US91/06332, published April 2 1992, and incorporated by reference. EP 433827, published June 26 1991, disclosed IL-12 as a cytotoxin lymphocyte maturation factor. In the patent, IL-12 is defined as a heterodimeric glycoprotein comprised of two covalently linked subunits having mol. wts of about 40 kD and 35 kD. The two subunits may be disulfide-bonded. IL-12 is administered to prevent or ameliorate GVHD. Dosage is 1 ng-0.1 mg (esp. 1.0 ng-1 microg)/kg daily for 3 days, the first dose given 1 hr. after transplant. IL-12 can be used as the native heterodimer or as subunits. (Updated on 25-MAR-2003 to correct PN field.)

Therapy of graft-versus-host disease - by administration of interleukin-12 to maintain and/or promote graft-versus-leukaemia effects.

Disclosure; Col 23-24; 20pp; English.

The invention relates to a method for the treatment or prevention of graft-versus-host disease (GVHD) which comprises the administration of interleukin-12 (IL-12) at the time of bone-marrow transplantation to maintain or promote graft-versus-leukaemia effects. Preferably, dosage is

CC 0.001-100 (preferably 1-100) mu g/kg for 3 days starting on the day of
CC the bone marrow transplant. IL-12 is administered daily until there is an
CC improvement in the condition. Administration is oral, cutaneous,
CC subcutaneous, intravenous or by inhalation preferably subcutaneous, or
CC intravenous. The present sequence encodes the human interleukin-12 35kDa
CC subunit

Nucleic acids encoding modified cytokine polypeptides (i.e. modified p40 and p35 polypeptides), useful for treating various diseases e.g. diabetic retinopathy and cancer.

Claim 91; Page 142; 223pp; English.

The invention relates to nucleic acids encoding modified cytokine polypeptides (i.e. modified p40 and p35 polypeptides). The modified cytokine polypeptides have T-cell proliferative and interferon (IFN)-gamma induction activities. The polypeptides and polynucleotides of the invention are useful for treating various diseases e.g. bacterial infections, AIDS, diabetic retinopathy and cancer. The polypeptide and polynucleotide may also be useful as a vaccine adjuvant, to enhance a vaccinated host's cell-mediated immunity for protective response to a pathogen. The present sequence is human p35 protein encoding DNA

CC The invention comprises the amino acid and coding sequence of the human
CC interleukin 12A (IL-12A) protein. Specifically the invention relates to
CC the identification of polymorphisms within the human (IL-12A) gene
CC sequence. The polymorphisms identified in the human IL-12A gene sequence
CC are useful in studying the expression and function of IL-12A, and in
CC screening drugs for the treatment of disorders such as AIDS, malaria,
CC tuberculosis and cancer. The IL-12A polymorphisms may be used to
CC haplotype and genotype the IL-12A gene of an individual. The IL-12A DNA
CC sequences of the invention can be used to create transgenic animals for
CC studying expression of the IL-12A isogenes in vivo. The present DNA
CC sequence represents the coding sequence of the human interleukin 12A (IL-
CC 12A) gene

Human interleukin-12 recombinant insect virus strain and its preparation.

Claim 4; Fig 6; 17pp; Chinese.

The invention relates to a recombinant baculovirus comprising DNA
encoding human interleukin 12 (hIL-12) and methods for its preparation.
The recombinant baculovirus strain is designated Autographa california
nuclear polyhedrosis virus AcNPV-hIL12 (CCTCC No. 2 V200108). This strain
contains two human IL-12 subunit genes, the IL-12 P35 subunit gene
(ACC47589) and the IL-12 P40 subunit gene (ACC47592) which are
respectively under the control of the viral polyhedrin and P10 promoters.
The baculovirus can be used in the recombinant production of human IL-12
which is suitable for treating tumours and bacterial, viral and other
infections. The present sequence represents the human IL-12 P35 subunit
gene used in construction of the baculovirus vector of the invention

PT Recombinant feline interleukin-12, useful as immunostimulant and for
PT treating e.g. viral infections in cats, and related nucleic acid
PT constructs.
XX
PS Disclosure; Fig 2; 35pp; German.
XX
CC This invention describes a novel feline interleukin-12 (fIL-12)
CC polypeptide (I) that is expressed, by recombinant gene expression in
CC eukaryotic or prokaryotic cells, in the form of both polypeptide chains
CC of subunits p35 and p40. These proteins are formed so that, in equimolar
CC concentrations and in presence of an immunizing antigen, they can be
CC administered to carnivores, particularly domestic cats. The invention
CC also describes a nucleic acid construct (II) encoding fIL-12 containing
CC sequences at least 95% identical with the p40- and p35-encoding sequences
CC (A, 990 bp and B, 669 bp respectively), reproduced in the specification,
CC as immunostimulants for immunization against infectious diseases and/or
CC for treating infections or tumors in felines, especially domestic cats.
CC The products of the invention have immunostimulatory, antiviral and
CC antitumor activity. Nucleic acid constructs that encode (II) are useful
CC as adjuvants for prophylactic immunization against viral diseases and for
CC treating diseases associated with a Th1 defect. IL-12 induces synthesis
CC of interferon gamma (Th1 response). The feline interleukin-12 polypeptide
CC is useful for carnivores, and particularly domestic cats in the
CC following: (i) as immunostimulant, for preventative or therapeutic use;
CC and (ii) treating tumors and autoimmune diseases, or diseases associated
CC with a Th1 defect, especially pre-existing infections by feline immune
CC deficiency virus (FIV), feline leukemia virus and corona virus

(UYBE-) UNIV QUEENS BELFAST.

Vandenbroeck K, Alloza I;

WPI; 2004-487887/46.

New expression vector comprising DNA encoding a subunit of a dimeric form of interleukin under transcriptional control of an ecdysone-inducible promoter, useful in preparing a composition for treating e.g., inflammatory disease.

Disclosure; Page 85-86; 87pp; English.

The present invention relates to an expression vector comprising DNA encoding a subunit of a dimeric form of interleukin under transcriptional control of an ecdysone-inducible promoter. The expression vector is useful in preparing a composition for treating a disease having a pathogenesis which includes endogenous production of cytokine IL-12, IL-23 or IL-27, e.g., infectious diseases, bacterial, protozoal or virus-induced inflammation, epithelial airway inflammation such as asthma, allergic disease, or autoimmune disease such as multiple sclerosis or inflammatory bowel disease. The present sequence is the coding sequence of the human interleukin-12 alpha chain used in the exemplification of the invention.

XX
CC The sequences given in AAQ67879-80 are expression cassettes which contain
CC the p40 and p35 subunits of human interleukin-12 (IL-12) under the
CC control of the entomopox virus (EPV) promoter and the vaccinia E3L
CC promoter, respectively. These sequences were used in the construction of
CC an ALVAC-based recombinant virus containing the genes for the two
CC subunits of human IL-12. The p40 subunit was amplified using primers
CC JP202 and JP189 and placed under the control of the entomopox virus (EPV)
CC 42 kD promoter in plasmid PBSHIL12p40II. The p35 subunit was amplified
CC using primers JP186 and JP201 and placed under the control of the
CC vaccinia E3L promoter using primers JP218 and JP220. The expression
CC cassette was isolated and ligated with pBSSK+ generating plasmid
CC PBSHIL12p35II. The p35 and p40 expression cassettes were excised and
CC assembled in pBSSK+ to give PBSHIL12 in which the two expression
CC cassettes are orientated head-to-head relative to each other. The
CC combination casette containing the poxvirus promoted genes for both IL-12
CC subunits was excised from PBSHIL12 and cloned in to ALVAC C6 vector
CC plasmid pC6L to give pC6HIL12. Recombination between this donor plasmid
CC and ALVAC rescuing virus produced recombinant virus ALVAC+IL12, which
CC contains both the human IL-12 genes in the C6 locus. The resulting virus
CC may be used in a composition for inducing an antigenic or immunological
CC response, ie. for immunisation against pathogens. (Updated on 25-MAR-2003
CC to correct PN field.)

Recombinant poxviruses comprising exogenous DNA encoding antigenic determinants useful in immunotherapy to immunize against cancers and other diseases such as influenza, Newcastle Disease and rabies.

Example 27; Fig 34; 163pp; English.

The present invention describes a recombinant poxvirus (I), comprising exogenous DNA encoding an antigenic determinant of a pathogen which is then expressed in vivo in infected host cells after administration to a patient and therefore induces an immunological response. (I) may be used to vaccinate patients against a wide range of diseases and disorders depending on the type of antigen encoded by the exogenous DNA. (I) may be used to vaccinate against diseases such as rabies, influenza and Newcastle Disease. It is particularly useful for immunising against cancers. The poxvirus (I) also provides a means of manipulating lymphocytes and tumour cells for use in cell-based immunotherapeutic modalities for cancer. (I) also have enhanced safety compared to unattenuated viruses (attenuation reduces the virulence of the viruses) and known recombinant poxvirus vaccines. This increased level of safety reduces the possibility of a 'runaway' infection in the host and reduces the chance of transmission from vaccinated to unvaccinated individuals and contamination of the environment. The present sequence represents a Vaccinia E3L/human IL-12 P35 expression cassette used in the exemplification of the present invention

XX
CC The invention describes a recombinant poxvirus containing exogenous DNA
CC in a nonessential region of the poxvirus, where the poxvirus is an
CC attenuated avipox Virus that expresses an exogenous DNA encoding
CC carcinoembryonic antigen and an exogenous DNA encoding B7 protein. Also
CC described are: a composition comprising a poxvirus above in admixture
CC with a carrier; and expressing carcinoembryonic antigen and B7 protein in
CC vivo comprising administering to a mammal the composition above.
CC Disclosed are: making recombinant poxvirus defined above; recombinant
CC poxvirus vaccine having an increased level of safety compared to known
CC recombinant poxvirus vaccines; and a modified vector for expressing a

gene product in a host. The recombinant poxvirus is useful for providing a recombinant poxvirus vaccine having an increased level of safety compared to known recombinant poxvirus vaccines. The recombinant poxvirus is useful for cancer therapy. This sequence represents a human IL-12 expression cassette used in the creation of NYVAC rescue virus and canarypox virus vector ALVAC comprising the human IL-12 gene.

Method for efficiently expressing recombinant human interleukin 12 in eukaryotic cell.

Claim 6; SEQ ID NO 3; 14pp; Chinese.

The invention describes the process of producing human recombinant interleukin-12 (IL-12) includes: providing a nucleotide sequence corresponding to the P35 subunit with the first signal peptide and a nucleotide sequence corresponding to the P40 subunit; inserting the nucleotide sequences into an expression vector; converting the eukaryotic cell with the expression vector; and culturing the transfected eukaryotic cell in condition suitable for recombinant human IL-12 expression. The process balances the expression amount of both P35 and P40 subunits and thus raises the expression amount of IL-12 with bioactivity via raising the expression strength of P35 subunit. This sequence represents the human interleukin-12 (IL-12) P35 subunit polynucleotide.

RESULT 1
DQ033872
LOCUS DQ033872 762 bp DNA linear GSS 02-JUN-2005
DEFINITION Homo sapiens IL12A gene, VIRTUAL TRANSCRIPT, partial sequence, genomic survey sequence.
ACCESSION DQ033872
VERSION DQ033872.1 GI:66885081
KEYWORDS GSS.
SOURCE Homo sapiens (human)
ORGANISM Homo sapiens
Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Primates; Catarrhini; Hominidae; Homo.
REFERENCE 1 (bases 1 to 762)
AUTHORS Nielsen,R., Bustamante,C., Clark,A.G., Glanowski,S., Sackton,T.B., Hubisz,M.J., Fledel-Alon,A., Tanenbaum,D.M., Civello,D., White,T.J., Sninsky,J.J., Adams,M.D. and Cargill,M.
TITLE A Scan for Positively Selected Genes in the Genomes of Humans and Chimpanzees

```
JOURNAL   (er) PLoS Biol. 3 (6), E170 (2005)
 PUBMED   15869325
ERENCE    2  (bases 1 to 762)
AUTHORS   Nielsen,R., Bustamante,C., Clark,A.G., Glanowski,S., Sackton,T.B.,
          Hubisz,M.J., Fledel-Alon,A., Tanenbaum,D.M., Civello,D.,
          White,T.J., Sninsky,J.J., Adams,M.D. and Cargill,M.
ITLE      Direct Submission
JOURNAL   Submitted (05-MAY-2005) Celera Genomics, 45 West Gude Drive,
          Rockville, MD 20850, USA
MENT      This sequence was made by sequencing genomic exons and ordering
          them based on alignment.  Translation starts at the beginning of
          alignment.

/clone_lib="UI-R-C0"
/note="Vector: pT7T3D-PacI; Site_1: Not I; Site_2: Eco RI; The UI-R-C0 library is a subtracted library derived from the UI-R-A1 and UI-R-E1 libraries. The UI-R-A1 library consisted of a mixture of individually tagged normalized libraries constructed from rat placenta, adult lung, brain, liver, kidney, heart, spleen, ovary, and muscle. The UI-R-E1 library consisted of a mixture of individually tagged normalized libraries constructed from 8, 12 and 18-day embryo. The tag is a string of 3-5 nucleotides present between the Not I site and the oligo-dT track which allows identification of the library of origin of a clone within the mixture. The subtracted library (UI-R-C0) was constructed as follows: PCR amplified cDNA inserts from a pool of UI-R-A1 and UI-R-E1 clones from which 3' ESTs had been derived was used as a driver in a hybridization with the pooled UI-R-A1 and UI-R-E1 library in the form of single-stranded circles. The remaining single-stranded circles (subtracted library) was purified by hydroxyapatite column chromatography, converted to double-stranded circles and electroporated into DH10B bacteria (Life Technologies) to generate the UI-R-C0 library. This procedure has been previously described (Bonaldo, Lennon and Soares, Genome Research 6: 791-806, 1996)"
